

AAUP App Privacy Notice

Effective Date: August 20, 2026

Introduction

Arab American University (AAUP) values and respects your privacy. This Privacy Notice explains how information is processed when you use the AAUP App.

The AAUP App helps prospective and current students explore academic programs based on information such as their secondary certificate system, certificate branch or classification, academic average, preferred campus, interests, career goals, and budget preference.

The App may be used:

1. As a standalone tool provided through an AAUP website or interface; or
2. With artificial intelligence assistance through ChatGPT or another AAUP-approved AI interface.

This Privacy Notice applies to the AAUP-operated App service. When the App is accessed through a third-party platform such as ChatGPT, that platform's own privacy policy and terms also apply to information processed by that platform.

Information We Process

Information You Provide

The App may process the following information when you choose to provide it:

- Secondary certificate system, such as Tawjihi, Bagrut, IB, or another supported certificate;
- Certificate branch or academic classification;
- Academic or officially equivalent average;
- Core-subject average, where relevant to an alternative admission route;
- Preferred AAUP campus;
- Academic interests;
- Career goals;
- Budget or tuition preference;

- Preferred language; and
- Confirmation that a foreign-certificate equivalent percentage has been officially verified.

You are not required to provide your name, student number, national identification number, home address, password, payment information, medical information, or copies of official documents to use the current version of the App.

Please do not enter passwords, identification numbers, financial-account information, medical records, or other unnecessary sensitive information into the App or an AI conversation used to access it.

Technical and Usage Information

AAUP's hosting and security systems may process limited technical information needed to operate and protect the service, such as:

- IP address;
- Browser or device information;
- Date and time of a request;
- Requested route;
- Response status;
- Response duration;
- Rate-limit events; and
- Technical error and security information.

AAUP does not use the App to create advertising profiles or to track users for advertising purposes.

How the App Works

The App uses structured AAUP program and admissions information to produce preliminary program matches.

The underlying eligibility calculation is based on configured academic rules and program data. It is not an official admission decision.

When AI assistance is used, the AI may help:

- Understand a student's natural-language request;
- Collect the information needed by the App;
- Submit the relevant fields to the AAUP App;
- Explain the generated results; and
- Answer follow-up questions.

The AI may generate inaccurate, incomplete, or outdated explanations. Students should verify important information using AAUP's official admissions pages and the Deanship of Admission and Registration.

The App does not independently access the AAUP student portal, university email, academic transcript, application file, or other private university records.

How We Use Information

Information processed through the App may be used to:

1. Generate a preliminary academic-program matching report;
2. Evaluate published certificate, average, branch, campus, interest, career, and budget criteria;
3. Explain why a program appears eligible, requires official review, or does not meet a published requirement;
4. Operate, maintain, secure, and troubleshoot the service;
5. Detect abuse, excessive traffic, technical failures, or security threats;
6. Improve the accuracy, accessibility, and usability of the App; and
7. Comply with applicable legal, regulatory, and university requirements.

Information submitted to the App will not be used to submit an admission application, reserve a seat, register for courses, modify an academic record, or make an official admission decision.

AI and Third-Party Platforms

Use Through ChatGPT

When you access the App through ChatGPT, OpenAI may process your conversation and related information according to OpenAI's applicable privacy policy, terms, account settings, and data controls.

ChatGPT may send task-specific information to the AAUP App service when needed to generate your report. The AAUP App does not receive unrestricted access to your ChatGPT account, complete account history, AAUP account, or university records.

Users should review the privacy controls available in their ChatGPT account before submitting personal information.

Standalone Use

When the App is used through an AAUP-operated standalone interface, the information entered into that interface is sent directly to the AAUP App service.

The standalone eligibility report can operate using structured rules without requiring an external AI model. If AAUP adds optional AI assistance to the standalone interface, the interface will disclose that use before information is submitted to the AI service.

Service Providers

AAUP may use authorized hosting, infrastructure, security, or technology providers to operate the App. These providers may process limited information only as necessary to provide their services and subject to applicable agreements and security requirements.

AAUP may also disclose information when required by law, regulation, legal process, or a valid request from an authorized public authority.

Data Storage and Retention

The current version of the App does not create a permanent student profile and does not intentionally store the academic information or generated report in an application database after the request is completed.

Information may remain temporarily in:

- The active browser or AI conversation;
- Server memory while the request is processed;
- Security, error, or infrastructure logs; and
- Third-party systems used to access the App, such as ChatGPT.

AAUP operational and security logs will be retained for up to 30 days and then deleted or anonymized unless a longer period is required for security investigation, legal compliance, or an active incident.

Conversation retention within ChatGPT or another external platform is controlled by that platform and the user's account settings, not by the AAUP App server.

Data Sharing and Disclosure

AAUP does not sell personal information collected through the App.

Information may be disclosed only:

- To authorized AAUP personnel who need access to operate, secure, investigate, or support the service;
- To approved hosting or technical service providers;
- To the AI platform selected by the user when AI-assisted access is used;
- When the user requests or authorizes the disclosure;
- When required by law or valid legal process; or
- When necessary to protect the security, rights, property, or safety of AAUP, its users, or the public.

Security

AAUP applies reasonable administrative, organizational, and technical safeguards intended to protect information against unauthorized access, alteration, disclosure, destruction, or loss.

These safeguards may include access controls, secure software-development practices, encryption in transit, monitoring, rate limiting, vulnerability management, incident response, and controlled access to operational logs.

AAUP applies information-security practices aligned with internationally recognized standards, including ISO/IEC 27001. The University has begun formal procedures toward obtaining ISO 27001 certification for its Information Security Management System.

No electronic system can guarantee absolute security. Users should avoid entering information that the App does not need.

Your Choices and Rights

Depending on applicable law and AAUP policy, you may request:

- Information about personal data retained by AAUP in connection with the App;
- Correction of inaccurate retained information;
- Deletion of retained information, subject to applicable legal and security obligations;
- Clarification of AAUP's data practices; or
- Assistance with a privacy or security concern.

Because the current App does not create user accounts or permanent profiles, AAUP may have little or no application data that can be associated with a particular user.

You may stop using the App at any time. In AI-assisted mode, you may also manage or delete conversations using the controls provided by the relevant AI platform.

Children

The App is intended for prospective university students, current students, parents, guardians, and other users seeking higher-education information. It is not directed to children under 13.

Links to Other Websites

The App may provide links to official AAUP pages or other external services. This Privacy Notice applies only to the AAUP App. External websites and platforms are governed by their own privacy practices.

Changes to This Privacy Notice

AAUP may update this Privacy Notice to reflect changes in the App, university practices, technology, legal requirements, or third-party services.

The updated notice will be published on this page with a revised effective date.
